

# PURVA WANKHEDE

7796250258 | [purvaa462@gmail.com](mailto:purvaa462@gmail.com) | Pune, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## PROFESSIONAL SUMMARY

Entry-level DevOps Engineer with hands-on experience in through internships and projects. Experienced in building automated pipelines, deploying containerized applications, GitOps workflows, infrastructure automation, security scanning and monitoring.

## EXPERIENCE

### DevOps Engineer - PearlThoughts (Remote) | Aug 2026 – Sep 2026

- Worked with AWS services including EC2, S3, and IAM, supporting cloud-based application configuration and troubleshooting.
- Built and maintained Jenkins and GitHub Actions CI/CD workflows with automated testing, linting, type checking, Docker workflows, and webhooks.
- Automated development environment setup using Python, Linux, Node.js, Yarn, and Docker, and deployed/troubleshoot applications on Kubernetes using kubectl, Pods, Deployments, Services, and NodePorts.

### DevOps Intern - Davine Technologies (Remote) | July 2026 - Present

- Containerized a multi-tier application using Docker & Docker Compose, configuring networking, persistent volumes, and custom images.
- Built Jenkins CI/CD pipelines with GitHub Webhooks for automated checkout, build, testing, and validation; troubleshoot pipeline failures.
- Provisioned AWS EC2 infrastructure with Terraform and configured servers using Ansible; deployed and managed applications on K3s/Kubernetes using Deployments, Services, ConfigMaps, and Secrets.

## TECHNICAL SKILLS

- Cloud: AWS (EC2, S3, IAM, VPC, VPC Peering, CloudFront)
- DevOps & CI/CD: Jenkins, GitHub Actions, ArgoCD, GitOps
- Infrastructure & Automation: Terraform, Ansible
- Containers & Orchestration: Docker, Kubernetes, Helm, Argo Rollouts
- Monitoring & Security: Prometheus, Grafana, Alertmanager, Trivy
- Programming & Scripting: Python, Bash, YAML
- Version Control & OS: Git, GitHub, Linux

## PROJECTS

### DeploySafe — End-to-End GitOps CI/CD Pipeline

**Tech Stack:** FastAPI, Python, Docker, Jenkins, Git, GitHub, Terraform, Kubernetes (K3s), Helm, ArgoCD, Argo Rollouts, Prometheus, Grafana, Alertmanager, Trivy, Slack, Linux

- Built an end-to-end GitOps CI/CD pipeline using Jenkins, Docker, Kubernetes, and ArgoCD, automating the deployment workflow from build to release and eliminating manual deployment steps.
- Achieved zero-downtime releases using Blue-Green deployments and Argo Rollouts with Prometheus-triggered automated rollback; diagnosed and resolved rollout failures (e.g., misconfigured readiness/liveness probes) during testing, validating that failed releases were reverted before user impact
- Hardened the pipeline against vulnerable container images by integrating Trivy as an automated security gate, blocking builds that failed vulnerability scans.
- Enabled real-time visibility into deployment health and system reliability by integrating Prometheus, Grafana, and Alertmanager, with Slack notifications for monitoring and incident awareness.

### AWS VPC Peering & Private Network Connectivity

**Tech Stack:** AWS, Amazon VPC, VPC Peering, EC2, Subnetting, CIDR, Route Tables, Internet Gateway, Security Groups, Private IP Networking, IPv4, AWS CLI, Linux

- Designed and implemented AWS VPC networking architecture with two isolated VPCs, non-overlapping CIDR blocks, public/private subnets, and Security Groups; configured VPC Peering with bidirectional routing to enable private EC2-to-EC2 communication, validated via ICMP/ping and route verification with 0% packet loss.

## CERTIFICATIONS

- DevOps & Cloud Computing — PW Skills
- Kubernetes for the Absolute Beginners — KodeKloud
- Linux for Absolute Beginners — KodeKloud

## EDUCATION

- B.Sc. Computer Science — Fergusson College, Pune (Aug 2022 – May 2025), 8 CGPA

## LANGUAGES

English, Hindi, Marathi
